

New gasket and new screws for Mach 16 bases

- A single gasket, remaining coupled to the base, instead of 5 O-rings
- Quicker and easier assembly
- Screw with hexagonal socket instead of cross groove
- Easy to screw.
- Possible to use pneumatic or electric screw drivers

Base, screws and seals are in the same kit.
So there is no problem of interchange.

Has been added a new " base gasket kit for Mach 16" code 0226007003, in addition to the one with code 0226007001, that is still valid as spare part for old bases.
